

365 ChatGPT PROMPT MASTERY

Questions to be answered

WHAT

What are you asking the system to do?
What is your desired output?

WHO

Who is asking?
Who should respond?

WHY

Why do you ask the question?
Why do you need the output?
Why is this an important prompt?

WHERE

Where in terms of industry, sector, geography?

WHICH

Which are the relevant details?

HOW

How should the AI respond?
How to structure the desired output?
How extensive/concise?

Example

"Please show me the steps to implement a Random Forest algorithm in Python. My desired output is a comprehensive, step-by-step guide to carry out this task."

"I'm a beginner data scientist. Ideally, please answer as an experienced data scientist."

"The question originates from a fintech startup located in San Francisco, California. This startup specializes in building AI-driven tools for risk assessment in the finance industry, primarily serving banking institutions across North America."

"The goal is to build a robust machine learning model. This prompt is critical as the implementation of a successful Random Forest algorithm can enhance our product's effectiveness and precision in risk prediction."

"We have a mix of numerical data (such as account balances, transaction volumes, loan repayment rates) and categorical data (like loan types, credit ratings)."

"We need a detailed response. Please include a step-by-step guide to building a Random Forest model in Python, with code snippets and explanations. It should also include guidance on parameter tuning and interpreting the results. The output should be structured in a way that it facilitates easy understanding and seamless implementation."
